

# Protect Your Hearing

The graph below shows potential situations with their corresponding sound levels and allowable exposure times (TWA). For every increase of 3 dB the TWA decreases by half. Remember, anytime you are exposed to sounds greater than 85dB, hearing protection is required - *not optional*. Keep your plugs or muffs handy!

Noise-induced hearing loss while working is 100% preventable. Take the proper precautions now so that you can enjoy your hearing later!
