

ASTR 202 - 001
Life in The Universe

Monday and Wednesday 2:30-3:45pm
Flandrau Planetarium

Instructor: **Dr Daniel Apai**
Office: Steward Observatory Rm N208B
email: apai@arizona.edu
Office hours: Mon 11am-12pm and Wed 9am-10am

Teaching Assistant: **Ms. Molly Simon**
Office: Kuiper Space Science Bldg. Rm. 326
Office hours: Tue 3:30-4:30pm, Fri 3:30-4:30pm
email: msimon@lpl.arizona.edu

Course Web Page d2l.arizona.edu

Course description:

The main goal for students in this course is to have fun learning about the possibilities for life in the Universe and, in the process, gain an appreciation for the methods used in science. To achieve this goal, we will study such seemingly diverse topics as the origin of the Universe, heavy element production, the formation of stars and planets, the nature of planets and their atmospheres, basic chemistry, geological and atmospheric evolution, biological evolution, cultural and technological evolution, interstellar travel, and communication techniques.

Textbook (optional):

Life in the Universe (3rd edition), Bennett and Shostak, Addison-Wesley

Miscellaneous: There may be other reading material provided for the class when needed. Examinations, quizzes, activities, and homework are based on material covered in the lectures.

Structure: Even though this class is large, you will be an active participant. We will have multiple choice quizzes during the lecture. Each week we will cover a particular broad topic. Some lectures will include breaks for demonstrations, quizzes, and discussion, and group activity. For these activities, the class will split in groups of 3-4 students. As a group you will fill in a worksheet and get a 'group grade' (same score for each person in the group). You will also have 'individual' homework associated to lectures and activities. Graded quizzes will be also given randomly through the semester.

PTYS214:

There is a significant overlap between ASTR202 and PTYS214 courses. You can only receive credit for either of these courses, but not to both. If you already completed PTYS214, do *not* take ASTR202.

Grades:

The grades are based on the combination of quizzes, group activities, homework, and two exams (mid-term and final). The following weights will be used:

Tutorials/Group Activities	12%
Quizzes	11%
Homeworks	10%
Assessments	2%
Mid-term	30%
Final	35%

In addition, there will be opportunities to volunteer for extra credit assignments.

The grading is absolute, i.e. there is no competition between students.

If your final percentage falls between the following ranges, you are guaranteed at least the following grade:

A:	87.5-100%
B:	75-87.5%
C:	62.5-75%
D:	50-62.5%
E	<50%

Exams:

There will be a total of two exams. One midterm exam will be given during a regularly scheduled class period (the date for the midterm exam will be announced in class). The final exam will be given at Wednesday, Dec 14 2016, 1 pm - 3 pm at the Flandrau Planetarium. This date and time is set by the University and cannot be changed. Exams will be cumulative but focused on the more recent material covered in class. They will consist of a combination of multiple choice questions and short essays. Exams will be closed book, closed notes, unless otherwise specified.

Mid-term: The mid-term exam is tentatively scheduled to October 12. By this time 40% of the quiz / homework / group activities will have been completed, so at the mid-semester mark you will know how well you are performing in the class and will have enough time to improve your expected grade, if needed.

Makeup Exams:

A makeup exam for the midterm will be allowed *only* for the following reasons:

- 1) University approved activity (dean's approval required);
- 2) Religious holidays (you must provide information on the holiday);
- 3) Medical emergency, for which you can provide a doctor's note;
- 4) Jury duty.

Makeup exams must be taken within 2 weeks of the exam date. No makeup exam is allowed for the final examination, whose date is determined by the University.

Quizzes

Quizzes will be given randomly throughout the semester. They will consist of a few multiple choice or true/false questions based on material from a recent lecture and should be very easy for students who attend class regularly and pay attention to the lectures. The *quiz with the lowest grade* will be automatically dropped from the final grade. There will be no make-up quizzes.

Quizzes are closed book, closed notes, unless otherwise specified.

Group Activities/Tutorials

There will be group activities based on concepts learned during a recent lecture. The group activities will be solved in groups and the entire group will receive the same grade. Everyone in the group must participate in solving the problems. There will be no make up activities, but *one* group activity will be dropped from your final grade.

Homework

Homework assignments will be announced in class and will be posted on the d2l website after the class. The assignments must be submitted by the due date on the d2l website. Homework are typically graded on a 10-point scale. Late homework will not be accepted. You are strongly encouraged to work together but the work that you submit **MUST** be your own.

The homework may include a peer-reviewed section; in such assignments credit will be given for your own work and for reviewing other students' work.

Errors in Grading

If you spot an error in grading you must call it to the attention of the TA or instructor within one week. An effort will be made to hand back material in a timely manner. Make sure to review all your handed-back material as soon as possible. Note that you can only discover an error in grading if you pick up your graded material and review it!

Clickers:

The class will utilize the TurningPoint clicker system.

You must have your clickers with you for every class.

Clickers will be used during the lectures, for quizzes, for the mid-term and also for the final exam.

Classroom Behavior – READ CAREFULLY!

Academic Integrity: It is strongly recommended that all students read the University of Arizona's Code of Academic Integrity. Details can be found at <http://dos.web.arizona.edu/uapolicies/>. All students in this course are expected to abide by this code, which will be strictly enforced.

The key things you need to be aware of are:

- **Cheating is not tolerated in any form.** If a student is caught cheating on an exam, the penalty will be failure in the course. You will be given "0 pt" for cheating on quizzes. In all cases a letter will be sent to the Dean of Students describing the incident. If you are aware that someone else is cheating, it is your obligation to inform the instructor.
- We allow, even encourage, collaboration on most assignments. However, **you must always write the final version of an assignment yourself**, and use your own words to describe what you have concluded. If we receive verbatim answers from more than one person we will divide the credit received among all those with identical answers. This holds for math as well as text.
- It is fine to make use of reference books or web sites. This is indeed what you must do in certain assignments. But if you do so make sure to put in quotes what is taken verbatim from a different source, otherwise make sure to rewrite things in your own words, and list the source of your information. **Plagiarism is strictly prohibited.** If you are uncertain as to what constitutes plagiarism see: <http://deanofstudents.arizona.edu/codeofacademicintegrity>.

Note that we will be using the software *Turnitin* within d2l to automatically check all assignments for plagiarism.

Threatening Behavior:

Check <http://web.arizona.edu/~policy/threaten.shtml>

Late Arrival – Early Departure: Late arrivals and early departures can be very disruptive for the class. They can be accepted as an exception, but if for whatever reason a student needs to do so on a regular basis, he/she should contact the instructor ahead of time, and try to sit near the exit doors. Repeated cases of unjustified late arrival or early departure will be considered poor class participation (student will be asked to show his/her ID) and affect the overall grade in the class. Leaving early may result in missing a quiz, no make up is allowed without prior authorization by the instructor.

Attendance: Regular attendance is essential to doing well in this class. Although there is a book for the class, you are expected to take notes. Furthermore, there will be several in-class quizzes that will contribute to your grade.

Doors Closed During Planetarium Operations: Because of the use of the planetarium late arrivals to the class can be very disruptive - please, always be on time. During the operation of the digital planetarium projector the doors are automatically locked. If you arrive late and the projector has been activated, you will need to wait until that session ends (usually 10 minutes) and the doors are unlocked.

Cell Phones, Laptops, and Gadgets: The use of cell phones is *not allowed* inside of the class and it is strongly suggested that they are **turned off** before getting to class. If you accidentally forget to turn your cell phone off, I expect that if the cell phone rings you will turn it off immediately. **Talking on the phone during class is not allowed**; it is disrespectful to the teaching team as well as to your fellow classmates. Failing to observe this rule will be considered poor class participation (student will be asked to show his/her ID to the instructor or TA) and affect the overall grade in the class. Phone usage is strictly forbidden during exams.

Taking notes on a laptop is allowed. However, those using laptops will have to sit in the front rows.

Electronic equipment can only be used for the purposes of the class. Students who play games, check Facebook, tweet, etc. generally perform poorly in the class and often also distract those sitting close to them.

Anyone caught using electronic equipment not strictly required for the class will have to leave the classroom.

No Food/Drinks: The Flandrau Planetarium **does not allow food and drinks** other than bottled water in the classroom. Also, if you find a problem with a seat or its writing table, please let us know, so that the problem can be addressed as soon as possible.

Students with Disabilities:

If you anticipate barriers related to the format or requirements of this course, please meet with me so that we can discuss ways to ensure your full participation in the course. If you determine that disability-related accommodations are necessary, please register with Disability Resources (621-3268; drc.arizona.edu) and notify me of your eligibility for reasonable accommodations. We can then plan how best to coordinate your accommodations.

Special Dates:

- September 5: Labor Day - no classes
- December 7: Last Class
- December 14, 1pm–3pm: Final exam at Flandrau Planetarium
